

ForeverLawn Select LX has taken realism to a new level. It is a thin bladed, lush, full grass with a tan thatch.

Application - Select LX is both beautiful and durable. The taller blades and dense construction provide a very soft, realistic feel, with a low luster appearance. It is

widely used in front yards, back yards, and decorative landscape environments.

Yarn - Select combines mono filament polyethylene blades tufted into the same row with dual colored (green and tan) textured nylon blades.

Grass - The blade height is 2 1/8". Tufting gauge is 3/8". Face weight is 60 ounces.

Backing - Select utilizes ForeverLawn's premium backing system. This is a multiple layer, non traditional backing with a geotex final back laminated to a urethane foam.

Seaming - ForeverLawn utilizes a micro-mechanical bonding system. This requires no adhesives and can be installed in incimate weather.

Infill - All rubber, about 1/2 pound per square foot.
